Cerro Verde

Cerro Verde is an open-pit mining complex that produces copper cathodes, copper concentrate, and molybdenum concentrate. It is located 30 kilometers southwest of the city of Arequipa, Peru.

The company contributes to the region's sustainability by promoting economic growth, environmental protection, social progress, and effective governance.

Through partnerships and consistent communication with authorities and civil society, it has developed socially impactful projects that benefit the population, such as the Virtuous Circle of Water. Among other achievements, this initiative has enabled 40% of the population to have access to potable water and ensured that 95% of the drains are treated, thus decontaminating the Chili River and providing a stable environment for their operations.

Products provided:

- Copper and molybdenum-based materials, with operational excellence, social and environmental responsibility

WILSON MIRANDA

General Manager

Confipetrol has over 24 years of experience in comprehensive operation and maintenance services, applying reliability techniques in mining, hydrocarbons, and energy across Latin America.

In Peru, it is recognized as one of the biggest companies in mine and plant equipment, operation and maintenance with a local workforce over 3,500 people. Its integrated management system is certified under ISO 9001, ISO 14001, and ISO 45001, following the ISO 55000 asset management standard.

Services provided:

- Operation and maintenance services in mining, hydrocarbons, and energy, enhancing efficiency, safety, and productivity for its clients

JEFF MORE

President and CEO

The world needs metals to thrive. MineSense provides revolutionary technology and data solutions that help mines maximize global metal production while minimizing global impacts. Specifically, the company helps ore mines increase output, efficiencies, and profitability while minimizing environmental footprints across land, water, and energy use.

Its first-of-its-kind, robust sensors are used at the start of the ore mining process, instantly and accurately characterizing minerals for optimized metal recovery. Real-time data improves immediate and long-term operations, automation, and planning, increasing mines' results, life extension, and overall bottom line.

Products provided:

- ShovelSense®: A robust sensor installed on mining equipment, providing real-time ore characterization at the extraction face, enabling precise separation of ore and waste.
- BeltSense®: Utilizing the same ShovelSense® sensor technology, BeltSense® is positioned on conveyors, offering continuous material tracking and advanced process control, optimizing downstream processing.

JUAN DANIEL ROJAS

Business Development Manager

Founded in 1871, The Weir Group PLC is one of the world's leading engineering businesses, with a purpose to make its mining and infrastructure customers' operations more sustainable and efficient.

Weir's highly engineered technology enables critical resources to be produced using less energy, water, and waste while reducing customers' total cost of ownership. The company is ideally positioned to benefit from structural trends that support long-term demand for its technology, including the need for more essential metals to support economic development and carbon transition.

The Group has approximately 12,000 employees operating in over 50 countries, with a presence in every major mining region of the world.

Products Provided:

Weir leverages its expertise in engineering, automation and materials science to deliver innovative solutions that optimize energy, water, and waste for smarter, more sustainable mining. Its product portfolio includes:

- ESCO®
- WARMAN®
- ENDURON®

Consulting services in engineering for the following sectors:

- Mining
- Environment
- Buildings
- Industry
- Transportation
- Infrastructure
- Energy
- Construction

GISELLA LOMBARDI

General Manager

Zafranal / **Teck**

Zafranal is a medium-sized copper-gold project located in southern Peru, 170 km northwest of Arequipa, between 1,400 and 2,900 meters above sea level. The project is owned by Compañía Minera Zafranal S.A.C. (CMZ), with an 80/20 shareholding between Teck Resources Limited and Mitsubishi Materials Corporation.

Zafranal will be a conventional open-pit mine, with a mill and concentrator plant that will produce copper and gold concentrate over a 19-year mine life. Its life-of-mine investment costs will generate robust cash flow and return on investment. Its EIA was approved in 2023 and is currently at the detailed engineering stage.
